### PREFERRED ENVIRONMENT

Visual Studio and MS SQL Server

### THE MOST AMAZING...

“

project I have completed in my career was a large scale cost averaging algorithm for inventory tracking with live data integrations.

”

### EXPERIENCE

#### FL Point-of-Sale

This project was a point-of-sale system created specifically for the restaurant industry. The software handles cash registers, server devices, and card readers, as well as sales modules

such as personalized menu suggestions. Was responsible for creating the front-end of this system using HTML, Bootstrap, jQuery, JavaScript, and AJAX. Completed back-end coding using C#, and also designed and developed the databases with MS SQL Server and Entity Framework.

State Agency

State Agency is a web-based property management system for a company in the UK to manage their leads, properties, tenants, buyers, sellers, and payments. Was responsible for using N-tier architecture both for presentation as well as business and data layers using real time data integration. Developed application using C#, ASP.NET MVC, jQuery, HTML, CSS, and Bootstrap.

Assan Ticket

An e-ticketing website which offers digital tickets for a variety of events and services. Was responsible for creating the presentation layer using N-tier architecture, and using C# to create the business and data access layers. Designed and developed the website for this project, as well as the mobile application and database. Development used C#, ASP.NET MVC, jQuery, MS SQL Server, HTML, CSS, and Bootstrap. Also created and deployed the application on the test and production servers, using the is to test and improve the software.

EMPLOYMENT

Allshore Virtual Staffing November 2018 – Present

Software Engineer

- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions or reviewing current system if it already exists.
- Present ideas for system development/improvement, including project timeline while working closely with clients.
- Produce detailed specifications, writing the program codes, and testing the product in controlled, real situations before going live.
- Document and demonstrate solutions by developing documentation, wireframes, flowcharts, layouts, diagrams, charts, training manuals for users, code comments, and clear code.
- Develop and deploy solutions by determining and designing system specifications, standards, and programming.
- Communicate with clients directly about project requirements and details on a daily basis.
- Improve operations by conducting systems analysis, recommending changes, and suggesting possible solutions.
- Learn about state-of-the-art development tools, programming techniques, and computing equipment. Continue to participate in educational opportunities.
- Develop software solutions by studying information needs, conferring with users, studying systems flow, data usage, and work processes, investigating problem areas, and following the software development lifecycle.
- Regularly commit code to repository servers and back-up work.

Technologies: C#, ASP.NET MVC, ASP.NET Web Forms, Entity Framework, ASP.NET Web API, MS SQL Server, JavaScript, jQuery, Bootstrap, HTML, CSS

FortLogics Solutions October 2017 – November 2018
